

## Coos Art Museum

### Spring Breakfast Fundraiser Youth Art Education Project

April 3, 2018 7:30 a.m.- 8:30 a.m.

We are happy to share information about our first annual Spring Breakfast Fundraiser. We hope that all attendees will learn about the ways the Coos Art Museum works to meet one of its' most important goals - providing top quality art education to the youth of our community.

The three programs described here are our most popular and visible youth programs provided throughout the year. These programs are the main focus of this new, exciting fundraising activity.

Please call 541-267-3901 if you would like more information.

Student art from the James Rizzi projects—2016

## Studio to School

In cooperation with  
the Oregon Community Foundation,  
Coos Art Museum,  
and Sunset School

Studio to School is a multi-year initiative that works in collaboration between Sunset Middle School and a community arts organization (Coos Art Museum) to design and deliver high quality sustainable arts education opportunities to all students. Artists-in-residence teach formal art lessons monthly with materials provided to all students through a grant initiative.

Art projects vary from drawing, painting, sculpture, design and composition, to opportunities in digital art and animation. Through sketchbooks and art journals students reflect and think critically about their process (problem solving) and finished works.

This program has been fully grant funded for the past 3 years. However, the grantor has reduced the funds by half through next year. We are working to locate funding to continue the full program and perhaps expand it to include the Millicoma students in the future.

Claymation/Animation Art Class—2016

## Art Cart in the Park Project

This program serves a larger portion of our community by bringing no cost art programs to families at the free lunch locations during summer break. The program keeps kids active in learning and doing while school is out of session and provides guided lessons focusing on art and science themes allowing the students to participate in the physical act of doing more than reading, watching or being told about it by an adult. The funds needed for this program will be for materials, travel, staffing and equipment for use in the parks.

Watercolor techniques project—2016

## CAM Community Days

This family friendly program is a way for the Museum to deepen its connection with our visitors and arts and cultural partners by offering 12 interactive, experiential Saturdays in the Museum. This program runs from January through December and includes demonstrations, art stations, and self-guided experiences for all, but especially for young working families who may not otherwise have such low cost art opportunities to share together.
